Case Study

PRESCRIPTION

Full revenue cycle outsourcing

PROFILE

Organization Type:

Nonprofit academic medical system

Size:

\$1.7B NPR; 3 hospitals (in scope)

Location:

Mid Atlantic

Relationship:

Client since 2019; Live with full outsourcing since November 2020

BACKGROUND

The organization was struggling to align revenue cycle functions across its acute and physician practices and facing an operating deficit. They recognized systemic problems were at play but needed help identifying root causes and long-term solutions.

Revenue Cycle Assessment Brings Clarity for Health System

Ensemble delivers playbook for turning around financial performance

IMPACT POTENTIAL: Up to \$115M Cash Acceleration + Net Income

Approach

A four-month strategic and operational review combined onsite visits, process observation and data analytics to identify opportunities to optimize structure, performance and results.

We interviewed leadership and sat side-by-side with front-, middle- and back-end staff to gain a 360-degree view of revenue operations and the environment. Daily recaps onsite provided opportunity to ask questions, clarify findings and ensure alignment throughout the environment.

Problem

Our multi-layered evaluation exposed multiple challenges, including process gaps and breakdowns between acute and physician practices. A history of inconsistent guidance resulted in an absence of infrastructure, shared strategic vision and transparent communication throughout the system. The system's growing financial losses also resulted in a Moody's downgrade.

Numbers across the board signaled a turnaround was needed.

\$62M average cash

variance

12.5% average first-pass denial rate

>62 average A/R days

Playbook for Success

A comprehensive blueprint mapping a future-state for the health system's long-term growth and sustainability ensured a seamless patient experience, accelerated cash collections and minimized revenue gaps.

By coordinating processes across its acute and physician practice, the health system could realize gains in multiple performance metrics, such as:

- > Increased point-of-service and back-end cash collections
- > Reduced accounts receivable (A/R) days
- Fewer missed charges + write-offs
